

Archery Thoughts

For Beginners

Stringing the bow

The string has a loop at either end, one being larger than the other. The larger loop is passed over the top limb onto the limb itself, the other end is slotted onto the groove on the bottom limb. Then using the bow string to flex the limbs in order move the top end of the string onto the top limb groove.

Adjusting Sights

When adjusting the sight, always move it in the direction to where the arrows have been grouping. For example, if the arrows group at twelve o'clock then move the sight up or if they group at three o'clock then move the sight in that direction.

Key to Field

New club members can request a key for the field after six months club membership.

Handicaps

In order to be awarded a handicap, you need to hand in to the Records Officer three 'official' score cards. They can be from a tournament or from the field, with a witness.
